3 SUMMARY OF TEST RESULTS

3.1 ISO 7637-1/-2 (1990):

3.1.1 Classification of Functional Status:

All classifications given below are for the total device / system functional status.

Class A: All functions of a device / system perform as designed during and after exposure to disturbance.

Class B: All functions of a device / system perform as designed during exposure; however, one or more of them can go beyond specified tolerance. All function return automatically to within normal limits after exposure is removed. Memory functions shall remain Class A.

Class C: A function of a device / system does not perform as designed during exposure but returns automatically to normal operation after exposure is removed.

Class D: A function of a device / system does not perform as designed during exposure and does not return to normal operation until exposure is removed and the device system is reset by simple "operator / use" action.

Class E: One or more function of a device / system does not perform as designed during and after exposure and cannot be returned to proper operation without repairing or replacing the device / system.
